

# Knowledge-aware Recommendation Algorithms Combining Graph and Word Embeddings

Giuseppe Spillo

Università degli Studi di Bari – Italy

**KARS** are RSs that use explicit **knowledge bases**, both structured (such as **knowledge graphs**) and non-structured (such as **plain text**), to provide suggestions.

- RQ1:** How do these mixed embeddings behave w.r.t. graph/text embeddings?
- RQ2:** How does this framework behave w.r.t. state-of-the-art frameworks?
- RQ3:** Which is the contribution of each component?
- RQ4:** Fairness? Explanations?
